

GeoJSON

GeoJSON^[1] is an open standard format designed for representing simple geographical features, along with their non-spatial attributes. It is based on JSON, the JavaScript Object Notation

The features include points (therefore addresses and locations), line strings (therefore streets, highways and boundaries), polygons (countries, provinces, tracts of land), and multi-part collections of these types. GeoJSON features need not represent entities of the physical world only; mobile routing and navigation apps, for example, might describe their service coverage using GeoJSON.^[2]

The GeoJSON format differs from other GIS standards in that it was written and is maintained not by a formal standards organization, but by an Internet working group of developers.^[3]

A notable offspring of GeoJSON is TopoJSON, an extension of GeoJSON that encodes geospatial topology and that typically provides smaller file sizes.

GeoJSON

Filename extensions	.json, .geojson
Internet media type	application/vnd.geo+json
Type of format	GIS file format
Extended from	JSON
Standard	RFC 7946
Open format?	yes
Website	geojson.org

History

The GeoJSON format working group and discussion were begun in March 2007^[4] and the format specification was finalized in June 2008.

In April 2015 the Internet Engineering Task Force has founded the *Geographic JSON working group*^[5] which released GeoJSON as RFC 7946 in August 2016.

Example

```
{ "type": "FeatureCollection" ,
  "features": [
    { "type": "Feature",
      "geometry": {
        "type": "Point",
        "coordinates": [102.0, 0.5]
      },
      "properties": {
        "prop0": "value0"
      }
    }
  ]
}
```

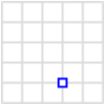

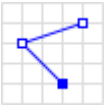

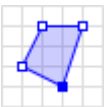

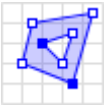

```

    },
  },
  {
    "type": "Feature",
    "geometry": {
      "type": "LineString",
      "coordinates": [
        [102.0, 0.0], [103.0, 1.0], [104.0, 0.0], [105.0, 1.0]
      ]
    },
    "properties": {
      "prop0": "value0",
      "prop1": 0.0
    }
  },
  {
    "type": "Feature",
    "geometry": {
      "type": "Polygon",
      "coordinates": [
        [
          [100.0, 0.0], [101.0, 0.0], [101.0, 1.0],
          [100.0, 1.0], [100.0, 0.0] ]
        ]
      ],
      "properties": {
        "prop0": "value0",
        "prop1": {"this": "that"}
      }
    }
  ]
}

```

Geometries

Geometry primitives

Type	Examples	
<u>Point</u>		<pre>{ "type": "Point", "coordinates": [30, 10] }</pre>
<u>LineString</u>		<pre>{ "type": "LineString", "coordinates": [[30, 10], [10, 30], [40, 40]] }</pre>
<u>Polygon</u>		<pre>{ "type": "Polygon", "coordinates": [[[30, 10], [40, 40], [20, 40], [10, 20], [30, 10]]] }</pre>
		<pre>{ "type": "Polygon", "coordinates": [[[35, 10], [45, 45], [15, 40], [10, 20], [35, 10]], [[20, 30], [35, 35], [30, 20], [20, 30]]] }</pre>

Multipart geometries

Type	Examples	
<u>MultiPoint</u>		<pre>{ "type": "MultiPoint", "coordinates": [[10, 40], [40, 30], [20, 20], [30, 10]] }</pre>
<u>MultiLineString</u>		<pre>{ "type": "MultiLineString", "coordinates": [[[10, 10], [20, 20], [10, 40]], [[40, 40], [30, 30], [40, 20], [30, 10]]] }</pre>
<u>MultiPolygon</u>		<pre>{ "type": "MultiPolygon", "coordinates": [[[[30, 20], [45, 40], [10, 40], [30, 20]]], [[[15, 5], [40, 10], [10, 20], [5, 10], [15, 5]]]] }</pre>
		<pre>{ "type": "MultiPolygon", "coordinates": [[[[40, 40], [20, 45], [45, 30], [40, 40]]], [[[20, 35], [10, 30], [10, 10], [30, 5], [45, 20], [20, 35]], [[30, 20], [20, 15], [20, 25], [30, 20]]]] }</pre>

Supported software

GeoJSON is supported by numerous mapping and GIS software packages, including [OpenLayers](#)^[6], [Leaflet](#), [MapServer](#)^[7], [Geoforge software](#)^[8], [GeoServer](#)^[9], [GeoDjango](#)^[10], [GDAL](#)^[11], [Safe Software FME](#)^[12] and [CartoDB](#)^[13]. It is also possible to use GeoJSON with [PostGIS](#)^[14] and [Mapnik](#)^[15], both of which handle the format via the GDAL OGR conversion library. [Bing Maps](#), [Yahoo!](#) and [Google](#) also support GeoJSON in their API services.

The Google Maps JavaScript API v3 directly supports the integration of GeoJSON data layers^[16] as of March 19, 2014.^[17] For the [Julia](#) language a [GeoJSON.jl](#) package is available.

[GitHub](#) also supports GeoJSON rendering^[18] and [Potrace](#) GeoJSON export.

[Geojson.io](#) supports GeoJSON rendering and editing in the web browser

TopoJSON

TopoJSON is an extension of GeoJSON that encodes topology. Rather than representing geometries discretely, geometries in TopoJSON files are stitched together from shared line segments called *arcs*.^[19] Arcs are sequences of points, while line strings and polygons are defined as sequences of arcs. Each arc is defined only once, but can be referenced several times by different shapes, thus reducing redundancy and decreasing the file size.^[20] In addition, TopoJSON facilitates applications that use topology, such as topology-preserving shape simplification, automatic map coloring, and cartograms.

A reference implementation of the TopoJSON specification is available as a command-line tool to encode TopoJSON from GeoJSON (or ESRI Shapefiles) and a client side JavaScript library to decode TopoJSON back to GeoJSON again. TopoJSON is also supported by the popular OGR tool as of version 1.1^[21] and PostGIS as of version 2.1.0^[22]

TopoJSON Schema

Given a GIS shape near coordinates latitude 0° and longitude 0°, a simple but valid and complete topojson file containing all metadata, *Polygon*, *LineString*, *Point* elements, *arcs* and *properties* is defined as follows:

```

{
  "type": "Topology",
  "transform": {
    "scale": [1, 1],
    "translate": [0, 0]
  },
  "objects": {
    "two-squares": {
      "type": "GeometryCollection",
      "geometries": [
        { "type": "Polygon", "arcs": [[0, 1], [1, 2], [2, 0], [0, -1]] },
        { "type": "Polygon", "arcs": [[2, 0], [2, 1], [1, 2], [1, 0], [0, -1]] }
      ]
    },
    "one-line": {
      "type": "GeometryCollection",
      "geometries": [
        { "type": "LineString", "arcs": [1] }
      ]
    },
    "two-points": {
      "type": "GeometryCollection",
      "geometries": [
        { "type": "Point", "coordinates": [0, 0] },
        { "type": "Point", "coordinates": [0, -1] }
      ]
    }
  },
  "arcs": [
    [[1, 2], [0, -2]],
    [[1, 0], [-1, 0], [0, 2], [1, 0]],
    [[1, 2], [1, 0], [0, -2], [-1, 0]],
    [[0, -1], [2, 0]]
  ]
}
```

Origine_Point
"coordinates": [0,0]

Under_Point
"coordinates": [0,-1]

Under_LineString
"arcs": [3]

Left_Polygon
"arcs": [[0,1]]

Right_Polygon
"arcs": [[2,-1]]

"arcs": [
 [[1,2],[0,-2]],
 [[1,0],[-1,0],[0,2],[1,0]],
 [[1,2],[1,0],[0,-2],[-1,0]],
 [[0,-1],[2,0]]
]
